

Emine Kiskanç

AI Engineer — LLM & Agentic Systems

emineksknc@gmail.com

[linkedin.com/in/emineksknc](https://www.linkedin.com/in/emineksknc) | github.com/emineksknc | [Google Scholar](https://scholar.google.com/citations?user=emineksknc)

SUMMARY

AI engineer with 3+ years of R&D experience bridging classical computer vision/ML and modern LLM-based agentic AI. Builds production-ready RAG pipelines, LangGraph multi-agent systems, and multimodal (text, image, audio) applications, deployed as scalable REST APIs with FastAPI and Docker. Delivered three TÜBİTAK-funded R&D projects end-to-end. Prior background as a QA Lead brings a strong focus on reliability, testing rigor, and stakeholder communication to AI system design.

TECHNICAL SKILLS

LLMs & Agentic AI: LangGraph (multi-agent orchestration), LangChain, LlamaIndex, Haystack, prompt engineering, Google Gemini API, LLaMA, Mistral, Qwen, Falcon, Zephyr, BERT

Retrieval & Vector DBs: RAG pipeline design, hybrid retrieval, Qdrant, Pinecone, Weaviate, Milvus, Neo4j (graph-based retrieval)

Computer Vision: YOLOv8, YOLO-World, ByteTrack (multi-object tracking), object detection, face recognition, OCR (OpenCV, skimage)

Generative & Multimodal: Stable Diffusion, Kandinsky, BLIP, Paligemma, CLIP, Whisper, Wav2Vec, Seamless, XTTS, Coqui

Deep Learning: PyTorch, TensorFlow, Keras

Infrastructure & MLOps: FastAPI, Docker, REST APIs, Celery, Redis, MLflow, Grafana, Prometheus, Jenkins, CUDA, Linux

Data & Databases: pandas, NumPy, scikit-learn, MongoDB, SQLite

Testing & QA: Selenium (BDD), JMeter, Postman, test planning, E2E/regression testing, Jira

EXPERIENCE

Independent R&D — Agentic AI — Self-directed portfolio work *Oct 2025 – Present*

DAN — DevOps Agentic Network | *Ollama (Llama 3.1), custom multi-agent orchestration, GitHub/Jira APIs*

- Custom, non-framework LLM-driven multi-agent system with GitHub, Reviewer, Jira, and Reporter agents dynamically sequenced by an LLM orchestrator based on natural-language goals, not a hardcoded pipeline
- Fail-closed guardrail layer: if the review agent's LLM output errors or comes back empty, the workflow halts and routes tickets to a blocked state instead of defaulting to "safe," with full audit logging

Repo: github.com/emineksknc/devops-agentic-network

NewsGraphRAG | *Neo4j 5.15 (graph + vector index), spaCy, Ollama*

- Fully local hybrid graph + vector RAG system over a 15-article AI-industry news corpus, using spaCy and Ollama for entity/event extraction
- Multi-hop retrieval that answers cross-document questions standard vector search misses — e.g. synthesizing a relationship spanning 2+ separate articles into one answer

Repo: github.com/emineksknc/newsgraphrag

R&D AI Engineer — Mobildev *Aug 2022 – Sep 2025*

- Designed and deployed end-to-end AI systems for real-world business use cases, covering data processing, model development, and production deployment
- Built Retrieval-Augmented Generation (RAG) and question-answering systems using LLMs and vector databases
- Developed and optimized multimodal AI pipelines (text, image, audio), including OCR, image captioning, and speech-to-text systems
- Integrated audio-to-text and text-to-speech models into scalable applications
- Deployed AI services as RESTful APIs using FastAPI and Docker, enabling scalable, production-ready solutions
- Improved model performance through data augmentation, preprocessing, and fine-tuning techniques
- Collaborated with cross-functional teams to translate business needs into AI-driven solutions

- Delivered three TÜBİTAK-funded R&D projects spanning biometric recognition, NLP/tone classification, and generative-AI knowledge bases (see Projects)

QA Lead — TechOps Center *Jan 2022 – Jun 2022*

- Led a QA team by planning, coordinating, and monitoring testing activities across multiple projects
- Acted as the primary point of contact for clients, managing communication, expectations, and delivery quality
- Designed and executed test strategies, test plans, and quality metrics aligned with business requirements
- Facilitated team meetings, tracked progress, and ensured timely delivery of high-quality outputs

QA Engineer — TechOps Center *Aug 2020 – Jan 2022*

- Designed and executed functional, regression, and end-to-end (E2E) test scenarios
- Performed API testing (Postman) and performance testing (JMeter)
- Automated test cases using Selenium (Java) with a BDD approach
- Managed defect tracking and reporting via Jira, ensuring clear communication with development teams

TÜBİTAK-FUNDED PROJECTS

Solution for Categorizing Personal Data on Multimedia Files (2022)

- Developed and integrated biometric recognition modules (signature, face, and fingerprint), including model training, optimization, and deployment

AI-Supported Audience Analysis & Intelligent Marketing Message Production (2023)

- Worked on text analysis and tone-of-voice classification for SMS messages and Named Entity Recognition (NER) modules, including training, optimization, and integration

Original Knowledge Base and Q&A / Content Generation with Generative AI (2025)

- Designed and implemented a knowledge base with vector database integration for efficient information retrieval
- Used prompt engineering and LLMs for semantic search, content understanding, and text analysis
- Built pipelines to ingest and extract structured/unstructured data (documents, images, video, audio) using OCR, speech-to-text, and CV techniques
- Ensured seamless API deployment and interoperability of knowledge retrieval and analysis modules
- Built a provider-agnostic LLM backend: local Ollama models were auto-discovered, and Google Gemini models were auto-listed via API when a user supplied their own key — both surfaced to the user through a single model-selection dropdown

PUBLICATIONS

- Classifying the Tone of Voice of Digital Marketing Text Messages Using Machine Learning Methods (Research Paper)
- Current Issues and New Generation Technologies in Computer Science — Chapter 9: Document Layout Analysis Methods for Information Extraction, pp. 149–161 (Book Chapter)

EDUCATION

Harran University — M.Sc. Computer Engineering (studies, 2019–2022)

Çukurova University — B.Sc. Computer Engineering (2014–2019)
